Final Office Action on the Merits of a RCE

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

- 2. The rejection of claims 36-55 under 35 USC 112, first paragraph, as failing to comply with the written description requirement is made moot by the cancellation of the instant claims.
- 3. Claims 56 and 58-60 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The instant claims recite "from about 20% to about 60% by weight of 1-docosanol". The present specification lacks support for said range and, thus, does not convey to the skilled artisan in the art that applicant, at the time the application was filed, had possession of the claimed invention.

It is noted that applicant points to Table 1, the Examples and page 4, lines 21-25 for support. However, Table 1 recites a range of 2-60% and Example 2 recites a

composition which does not contain octadecanol and, thus, differ from the instantly claimed composition.

Claim Rejections - 35 USC § 103

- 4. The rejection of claims 36-55 under 35 USC 103(a) over Fuenzalida et al. (EP 952,208), Jones et al. (Metabolism, 1998), Cleary (US 4,495,094), Sorkin, Jr. (US 5,952,393) and Milstein et al. (US 6,394,230) in combination is made moot by the cancellation of the instant claims.
- 5. Claims 56-63 are rejected under 35 USC 103(a) over Fuenzalida et al. (EP 952,208), Sorkin, Jr. (US 5,952,393), Gamble et al. (US 6,596,776), Cleary (US 4,495,094); Milstein et al. (US 6,394,230) and Jones et al. (Metabolism, 1998) in combination.

Each of Fuenzalida, Sorkin and Gamble teaches policosanols, i.e., long chained aliphatic alcohols, are useful in lowering plasma cholesterol levels (see each reference in its entirety, especially **Fuenzalida et al.**, sections 0003-0007, 0050, 0057, 0068, 0071 and 0076; **Sorkin, Jr.**, col. 1,lines 5-8; col. 3, lines 11-26; examples 1 and 2; **Gamble et al.**, col. 2, lines 4-21; col. 3, line 52 – col. 4, line 39; col. 9, lines 44-63).

Fuenzalida teaches the presence of fatty alcohols such as eicosanol, docosanol, tetracosanol and hexacosanol in tall oil (see especially Example 9, Table 4) and Cleary teaches the presence of octadecanol in tall oil (see the reference in its entirety, especially Example II).

Application/Control Number: 09/922,532

Art Unit: 1617

Each of Gamble, Milstein and Jones teaches the incorporation of the cholesterol-lowering agents, such as mixtures of aliphatic alcohols, into food substances such as margarine is known in the art (see each reference in its entirety, especially **Gamble et al.**, col. 9, lines 52-63; **Milstein et al.**, col. 1, lines 18-35; **Jones et al.**, page 751, 1st paragraph).

Based on the prior art as discussed above, the utilization of a composition comprising long chained aliphatic alcohols in lowering plasma cholesterol levels would have been obvious to the skilled artisan in the art at the time of the present invention.

The instant claims differ from the cited prior art by reciting specific ranges of eicosanol, docosanol, tetracosanol and hexacosanol with or without a specific amount of octadecanol. However, determination of the amounts of each of the alcohols in the composition that would be effective in lowering cholesterol level requires only routine experimentation which was within the level of skill of the ordinary artisan in the art at the time of the present invention. Therefore, the recitation of specific ranges of the active ingredients is not patentable absence a showing of criticality which is not present in the present specification.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Application/Control Number: 09/922,532

Art Unit: 1617

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
